Portfolio · GitHub · LinkedIn

PROFILE

Data Science and Artificial Intelligence student at UFPB, seeking an internship in software development, data or AI. I build Python applications and React interfaces with APIs, persistent storage and model evaluation. I use AI-assisted development with code review and checks appropriate to each project.

SELECTED PROJECTS

Creator Growth Feedback Loop · Code

FastAPI · React / TypeScript · PostgreSQL · YouTube Data API

An application that imports public YouTube metrics, updates a dashboard and suggests the next content experiment. I built the flow from imports to the interface and manually checked metrics and recommendations using 15 videos. Suggestions describe observed associations; causality has not been demonstrated.

Resume Match AI · Code

Python · FastAPI · Streamlit · Information retrieval

An eight-stage workflow connecting job requirements to evidence in a résumé. I compared lexical search and optional models across 36 internal synthetic cases: identical labels, with higher CPU latency for the models. Lexical search is the default; this evaluation does not establish quality in real hiring processes.

Credit Risk Classification · Code

Python · scikit-learn · Neural networks · Collaborative project

A study developed with Gustavo Pereira, comparing models on Home Credit and recording a separate replication on UCI. The validation-selected MLP achieved 0.7757 ROC-AUC on 4,377 test records, versus 0.7174 for logistic regression. Probabilities are not calibrated; no production deployment is claimed.

UNIVERSITY OUTREACH EXPERIENCE

PET-Saúde Digital | UFPB / SES-PB

August 2025 - present · Volunteer · 4 hours/week during the semester

Reviewing TAÍS health-assistant responses against protocols, contributing to the knowledge base and revising prompts with the team. My contribution focuses on evaluation and content, without writing code for TAÍS.

EDUCATION

B.Sc. in Data Science and Artificial Intelligence
Federal University of Paraíba · expected graduation: July 2028.

TECHNOLOGIES

Python, SQL, JavaScript / TypeScript, FastAPI, React, PostgreSQL, scikit-learn, Git and Docker. English: technical reading, work messages and prepared spoken updates.
