VINICIUS RODRIGUES

SOFTWARE ENGINEER | BACKEND & FULL-STACK
João Pessoa, Brazil | viniciusmangueira04@gmail.com |
Open to internships and early-career roles worldwide; remote from Brazil or relocation when eligible. | LinkedIn |
github.com/viniciusrodriguesai | Portfolio

PROFESSIONAL PROFILE

Software engineering candidate building tested, security-conscious Python APIs and React/TypeScript applications. Experienced with real public-sector AI quality work and independent end-to-end products; interested in startup engineering roles.

EDUCATION

Federal University of Paraíba (UFPB) **2028**
B.Sc., Data Science and Artificial Intelligence *João Pessoa, Brazil*

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C++, Data Modeling, Database Design, Performance Optimization, Cross-Functional Collaboration, Distributed Systems
Development: FastAPI, React, Pydantic, REST APIs, PostgreSQL, MySQL, SQLAlchemy, SQLite
Quality / deployment: Docker, GitHub Actions, Pytest, Vitest, nginx, HMAC, idempotency, CI/CD

RELEVANT EXPERIENCE

PET-Saúde Digital, UFPB / SES-PB | *AI Research Monitor (Volunteer)* **2025 - Present**
University - Paraíba State Health Secretariat collaboration | Public-sector telehealth
- Contributed to TAÍS, a GPT-4.1 Mini/RAG assistant on Paraíba's public telehealth portal, evaluating responses against official healthcare workflows and helping identify incorrect oncology and telediagnosis guidance.
- Co-developed a team knowledge base of 26+ curated Q&A pairs across 7 care pathways; helped identify incorrect oncology and telediagnosis guidance and participated in making the chat widget accessible sitewide.

SELECTED PROJECTS

Creator Growth Feedback Loop creator-growth-feedback-loop.onrender.com **2026**
- FastAPI, React, TypeScript, PostgreSQL, YouTube Data API
- Built a full-stack product for YouTube creators that imports public YouTube metrics, stores content, and refreshes interactive analytics and experiment suggestions without page reloads.
- Implemented duplicate checks, API validation, readiness checks, demo write limits and backend/frontend CI; source includes a Render demo URL and video walkthrough.

Church Roster Bot github.com/viniciusrodriguesai/church-roster-bot **2026 - Present**
- Python, FastAPI, PostgreSQL, Meta Cloud API (mock-tested)
- Designed an auditable scheduling flow tested with 8 synthetic volunteers, consent-based exceptions, permissions, waitlists and automated invitations.
- Implemented HMAC webhook verification, event deduplication and background workers; PostgreSQL concurrency tests validate idempotent acceptances. Real WhatsApp rollout pending.

World Bank Dashboard github.com/viniciusrodriguesai/worldbank-economic-dashboard **2024**
- FastAPI, React, TypeScript, Docker, nginx
- Built economic-indicator comparisons across up to 5 countries with safe CSV export and evaluated forecasts; added resilient caching, throttling and frontend/backend test gates. Not publicly deployed.

Resume Match AI github.com/viniciusrodriguesai/resume-agent-system **2026**
- Python, FastAPI, Streamlit, SQLite, NLP, TF-IDF, RapidFuzz, Sentence Transformers, Pytest, Docker, GitHub Actions
- Built a modular, privacy-conscious 8-stage resume-to-job matching system with explainable scoring, PII redaction, validated document uploads, and SQLite history; deployed a lexical Streamlit demo on Render.
- Benchmarked lexical matching, multilingual embeddings, and reranking on 36 internal synthetic cases; measured 6.7–10.7× higher median latency with unchanged classifications.
